ADAM HALL STAGE FABRICS - PROTECTIVE AND DECORATIVE

Adam Hall provides a wide range of stage fabrics for protective and decorative purposes. These include lightweight stage mesh that is wind-permeable and tear-resistant, fence panel gauze or blackout cloth for backdrops and curtains. Our stage fabrics are availabe in bulk and convenient ready-made sizes.

GAUZE

GAUZE IS ESSENTIAL FOR STAGES, FOH AND DELAY TOWERS OR PLATFORMS

The lightweight but stable-and tear-resistant stage mesh is especially suited for outdoor events as covers, backdrops, curtains, and for privacy. The permeability of the material is an important property, as it prevents stress due to wind, gusts and storms, and ensures a stable structure.

The stage gauze by Adam Hall is available in four grades from close to loose-knit with different levels of opacity and a wind permeability of 16 to 50%. You will be able to find the appropriate material for almost all weather conditions. All versions are water-resistant, acid- and weatherproof, UV-resistant, colour-fast and washable for up to 3 years, and suitable for temperatures from -30° to 70°.

It will save time in setting up, and can be easily attached to all truss systems using cable ties or Spannfix. In addition to providing protection for stage equipment and performers, it also creates a professional look. The gauze fabrics by Adam Hall can be individually printed upon request, and can therefore be turned into an eye-catching advertising space.

GAUZE FOR OUTDOOR EVENTS

The mesh, most likely named after the Palestinian city of Gaza, is also used for open-air events, where it is used in the panelling of stage structures, FOH and delay-towers, podiums and for setting up stages. Known in English as "stage mesh", the material also serves as backdrops, stage curtains and especially for privacy and as protection against dust and wind.

MAIN FEATURES OF GAUZE

The mesh fabric, made of polyethylene, has special characteristics and is suitable for a broad scope of applications: it is extremely tear-resistant, structurally stable, while being lightweight and classified as a B1 flame retardant according to the DIN 4102 standard. It is also water-resistant, weatherproof, UV resistant and last but not least, it is washable.

GAUZE IS A WIND-PERMEABLE!

The most important feature of the stage gauze is its wind permeability. It prevents the sail effect and ensures stability for mobile constructions, even at higher wind speeds. Adam Hall offers this material in four different grades ranging from fine to loose knit, with wind permeability factors of 16 to 50%. So, the stability of stage structures can be accurately calculated and the appropriate mesh selected according to the weather forecast and wind strength.

GAUZE AND TRANSPARENCY

The weave structure also determines the levels of blackout and sound permeability. Therefore, loose-knit mesh is suitable for covering speaker towers, while the particularly fine-mesh material is already opaque from a distance of five metres.

FURTHER USES FOR GAUZE

Thanks to its special properties, the polyethylene gauze is not only used in the event-technology – it is for example ideally suited as turf protection, because it is breathable, for the lining of trade fair stands, as paintball netting and for fence panel covering. With the B1 classification, it is also suitable as a cover for sprinkler systems on ceilings.

GAUZE FROM ADAM HALL

Gauze from Adam Hall is available in black and white, by the metre, and is ready-made with hem and eyelets. It can be easily attached with cable ties to all carrier systems and trusses, protects technology as well as performers whilst offering a professional stage appearance.

SAVEKING SHOCK ABSORBING SAFETY

Safety rope with an integral brake for controlled dissipation of fall energy, approved as a safety rope for use in the entertainment industry (BGV C1). When conventional wire ropes are used, high levels of linear momentum can result if secured equipment falls. SAVEKINGS wire ropes incorporate a loop with a brake clamp. In the event of a fall, the loop constricts, thus absorbing the high shock forces. A color marking on the brake clamp serves as an indicator that the rope is in good condition.

HUMFREES UNIVERSAL SYSTEM

HUM & NOISE IN RACK SYSTEMS ...

Usual mounting of 19" equipment in a rack system results in contact between the devices through the rack rails. This creates ground loops - the most common cause of hum and noise.

The unique Humfrees mounting system interrupts these groundloops by isolating the 19" units from the rails and from each other. Scarring and scratching of the front panel by the mounting screws is also eliminated. Set for one unit.
