

DISINFECTION STAND

How to build your own, using
Adam Hall items

SETUP

In most points the setup is pretty simple and self-explanatory. Please view the following pictures and notes regarding the setup

For the stand itself – you could use any similar stand from other brands. However, this Gravity setup does have one vital advantage. You can mount an additional weight plate to the bottom of the base to make it heavier (Gravity item GMS2WP). This is particularly important if you are using a mechanical dispenser instead of an electronic one.

SETUP

You will notice that the clamp for the drinks holder has been mounted diagonally – this is a standard feature of the Gravity drinks holder and ensures that it is centered on any pole diameter. On the right picture you will see that we luckily designed the drinks holder to have a gap at the front which is a perfect peek hole for the sensor.

SETUP

The drip-tray is optional and the only part where you will have to do some “Macgyvering”. Just remove the front knob of the mic holder clamp and glue the tray onto the flat surface using some super glue.
